Steve Nguyen

Computer Science Student | Cal Poly Pomona
phuc.h0168094@gmail.com | Chino, CA | LinkedIn | github.com/stjp777 | stjp777.github.io

EDUCATION

California State Polytechnic University - Pomona Chino, CA
Bachelor of Science, Computer Science August 2025 – Present | GPA: 3.87
Relevant Coursework: Data Structures and Algorithms, Discrete Mathematics, Calculus, Intro to Web Science

PROJECTS

Internship Tracker - Internship Aggregation & Alert Tool | *Python, Flask, SQLite, Gmail API* 2026
GitHub: https://github.com/stjp777/internship-tracker | *Live:* https://stjp777.github.io/internship-tracker/

- Built a Python/Flask aggregation tool that pulls internship postings from 9+ companies' public APIs (Greenhouse, Workday, Eightfold) instead of scraping.
- Integrated the Gmail API via OAuth to parse LinkedIn and Indeed alert emails automatically, ensuring the two largest job boards are never scraped directly.
- Designed a database abstraction layer supporting local SQLite and shared Turso cloud storage, with rate-limited polling and per-user tracking to prevent duplicate or missed notifications.
- Automated centralized polling every 30 minutes via GitHub Actions and published a live, read-only dashboard to GitHub Pages, with Discord webhook and desktop toast notifications for new matches.

IRIS - Local AI Companion | *Python, Ollama, Qwen 3.5* 2026
Team project, Software Engineering Association at Cal Poly Pomona (private repo)

- Found why the model spent its whole reply budget on hidden reasoning (48 to 59 s, empty answers) and turned thinking off, cutting replies to about 1 s; wrote a benchmark script that tracks speed and memory (44 tokens/s, 6.2 GB).
- Built an 8-state mood system that combines keyword rules with an LLM judge, and cut the personality prompt to 1,073 tokens to leave room for long-term memory; 6 pull requests merged.

Suggestor - Restaurant Recommender | *Python, FastAPI, PostgreSQL, Supabase* 2026
GitHub: https://github.com/ahmedelngr/Suggestor

- Backend developer on a team project: connected the FastAPI service to the Supabase Postgres database and built an authenticated /me profile endpoint with 8 tests (in review).

Python AI Coding Agent | *Python, Google Gemini API, Tool Calling* 2026
GitHub: https://github.com/stjp777/python-ai-agent

- Built an AI agent that iteratively reads files, writes code, runs scripts, and verifies its own output using a tool-calling loop with Google Gemini.
- Implemented four tool functions (get_files_info, get_file_content, write_file, run_python_file) that the LLM invokes autonomously to debug and fix code.

WORK EXPERIENCE

Pho N Mor - *Server* Chino Hills, CA | June 2025 – Present

- Coordinated service for 100+ diners during peak hours by efficiently prioritizing food orders and customer requests in a fast-paced environment.
- Trained and mentored new hires on service protocols and team standards, ensuring consistency across a 10+ person staff.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, HTML, CSS
Libraries: Flask, FastAPI, requests
Tools & Platforms: Git, GitHub, VS Code, GitHub Actions, SQLite, PostgreSQL, Supabase, Ollama, Gmail API
